Art Unit: 1764

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 4-12, 16-23 and 26- 35, drawn to an evaporator and condenser unit for use in distilling a liquid, classified in class 202, subclass 182.
- II. Claims 24-25, drawn to a method of fabricating a heat exchanger plate, classified in class 165, subclass 2.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another materially different apparatus such as : boiler-type distillers; thin-film distillers; rotary evaporators having a plurality of horizontally stacked annular plates and vapor compression distillers as recognized by applicant noting, e.g., pages 2-4 of the specification.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification; and the search required for Group I is not required for Group II; and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper

Art Unit: 1764

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
